## New Tech Pharmaceuticals Private Limited

### Abstract

How to stay competitive in a fast-moving global market is a challenge to many pharmaceutical companies are faced with today. Pharmaceutical companies are implementing Project Portfolio Management systems to better manage their new product development projects from Idea-to-Launch in order to stay competitive

Successful implementation of Project Portfolio Management involves team work and is dependent upon a number of factors, including the system, processes, structure of the organisation, management and employees.

Project Portfolio Management allowed Actavis to build a comprehensive view of projects that were spread across research and development centres worldwide and were to be launched in multiple countries. The system, together with the process, enabled the company to transform from chaos to structure
